

There already exists several mobile and web apps that mimic the functionality of Mafia/Werewolf. Some great features that exist on these current versions are;

- “Werewolf” has basic narrator
- Unlockable characters
- Party play

However, there are also several issues that accompany the current versions of Mafia/Werewolf apps, such as;

- One device only (whole game is on one phone)
- AFK (away from keyboard) issues
- No offline functionality
- No AI

To fix the AFK issues, there should be a timer implemented into our design. This timer can be adjusted according to the creator of the game. We also want to implement a “custom roles” functionality, where a player can create their own character.

The main functionality we want to focus on for this app is the narration. The narration when it is stripped to the barebones needs to take care of the most boring role within the game.

Narration:

- Differing voices
- Humor?
- Passing narration to another player (with better phone speaker)
